

ABSTRACT OF DISCLOSURE

5 The invention provides a media storage container having a base and lid connected by a hinge with base and lid front walls disposed opposite the hinge. The base and lid front walls or sidewalls of the container include portions of the title of the item of recorded media within the container such that a complete title is viewable when the container is closed. In one embodiment, the invention provides printed letters on the base and lid.

10 Another embodiment of the invention provides raised letters that are built into the base and lid.
